

Data Center Maintenance

STI provides data center maintenance service to companies who wish to reduce their operation cost. Particularly companies with core business other than software and hardware mostly spend enormous time and money to identify required resource to maintain data center. They can utilize the service of STI and can concentrate in their core business in addition to reducing the expenses.

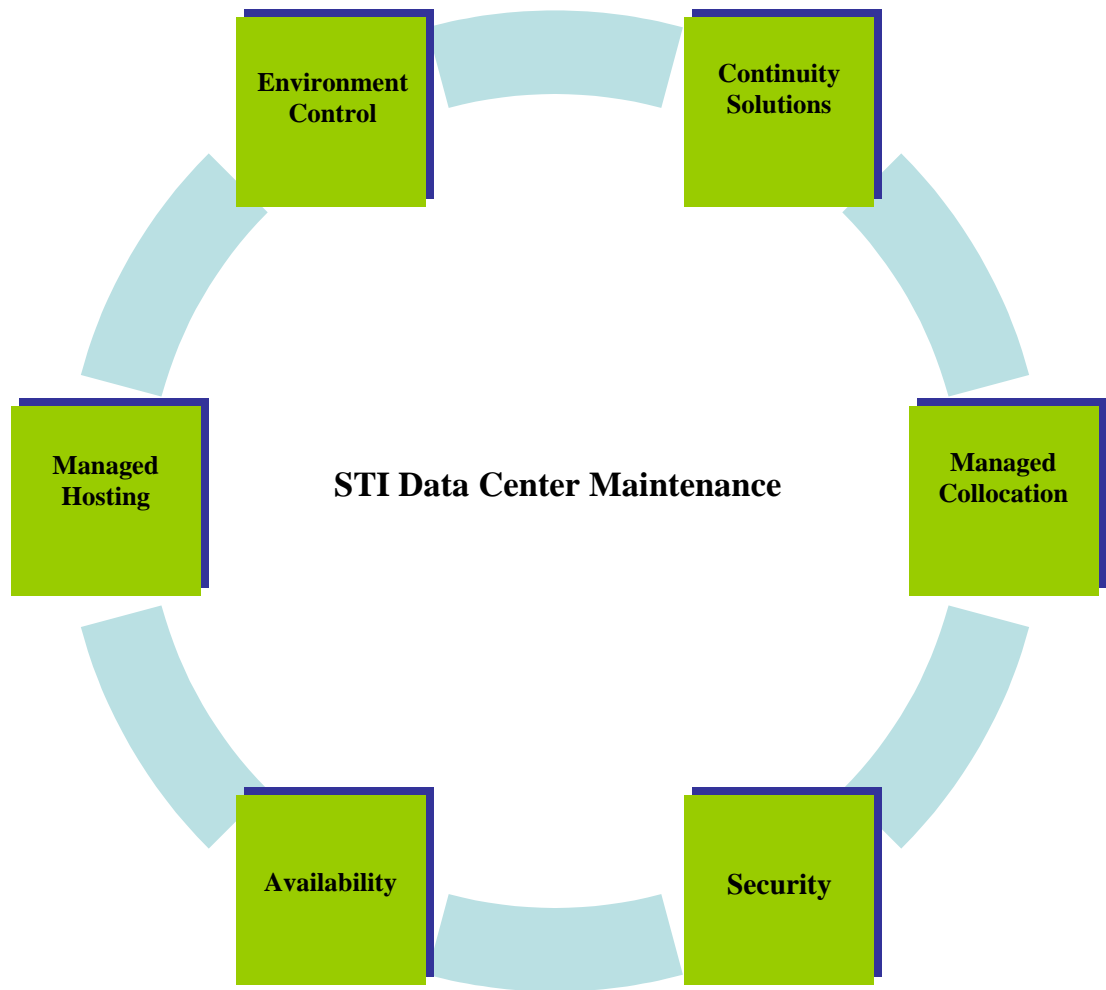

How STI can help you?

In STI Data Center you will be able to outsource the management and day-to-day operations of your servers by placing them in a secured environment with regulated power supply, dedicated high speed Internet connection, security and highly monitored environment. In addition to this, you will be able to remotely monitor your connection, power cycle individual servers and track your bandwidth usage.

Handling your own complex servers involves the integration of multiple design and engineering discipline. It requires a huge space and lots of money and tons of time. Using our Data centers, your Internet applications will be up and running quickly, and at a very meager cost.
